Web Development

From static homepage to multilingual content-management, we are your partner for working with your data in the Net:

We develop database driven applications, from basic webshop to complete e-commerce framework integrating modules for ERP, ePOS, HR, CRM, CMS . . .

Your needs for security and optimised interfaces for your employees, visitors and customers are always our main concern.

Of course we work according to the guidelines of the W3C. Your website will be accessible and optimised for search engines (SEO).

We exclusively employ the leading professional open source software packages:

- Full control over your IT investment
- No vendor lock-in syndrome
- Adaptable to your needs
- Never any licence issues
- The highest technical standard.

For eight years we were responsible for the development, programming and maintenance of the website of Germany's second largest manufacturer of hoses and hose systems.

This is a database driven multilingual website featuring a comprehensive product catalogue and knowledge base in ten languages including Polish, Russian and Chinese.

MDI Medical Ltd in Kells is Ireland's largest distributor of medical devices.

In 2012 after revising and unifying the CI we relaunched their web presence consisting of two websites for ROI and NI, based on a common database. Professional open source CMS featuring in-place editing with the most intuitive user interface.

In the forthcoming next step both websites will be consolidated into one single website.

For the German subsidiary of MAVALA S.A., the iconic swiss manufacturer of premium cosmetics and professional grade tools and supplies, we designed and programmed their website in 2007, including knowledge base and online store.

In 2014 the mobile version went online.

We provide development, programming and maintenance, and conduct social marketing.

Together with German youth welfare offices we developed online tools and portal sites for parents, youth welfare officers and service providers like day-care centers.

The objective is to supply the adequate tools for the legally mandated implementation of networking frameworks in this field.

These websites and online applications are hosted on our servers (SaaS).

We develop and maintain online shops based on the leading open source ERP framework integrating modules to manage all business areas like HR, manufacturing and accounting.

CGI Visualisation

To adequately visualise certain products or complex workflows by other means is often impossible or leads to higher costs. With CGI 3D graphics we enable you to ideally display new concepts and products during development, or to present existing products in an attractive and engaging manner.

Utilise the multifaceted possibilities of 3D graphics and animation:

- Illustration for product catalogues and training material
- Assistance with presentations and trade-fair appearances
- Enhancement of websites (e-commerce) and multimedia
- Visualisation for architecture, trade-fair construction, engineering and product design

You get fixed prices providing you with a solid basis for your cost calculations.

For leading cable manufacturers like Pirelli Deutschland GmbH (now Prysmian Kabel und Systeme GmbH) and Coroplast Fritz Müller GmbH & Co. KG we produced illustrations covering their product ranges, to be used in data sheets and catalogues, also to present customers yet nonexistent prototypes still in development.

For the Adhesive Tapes branch of Coroplast we created visuals for product catalogues and for large-sized prints to be used at trade fair stands.

Degussa AG (now Evonik Degussa GmbH) needed to visualise some complex workflows and production methods.

Graphic Design and Print

We deliver innovative graphic design, featuring diligent typography rooted deeply in the knowledge and classic values of the typesetting profession.

Flyer, brochure, book, advertisement, pull up banner — we design everything to the highest standards.

Complete print-service, including processing, packaging and shipping.

Reliability even when working to a very tight schedule, without compromising our level of quality.

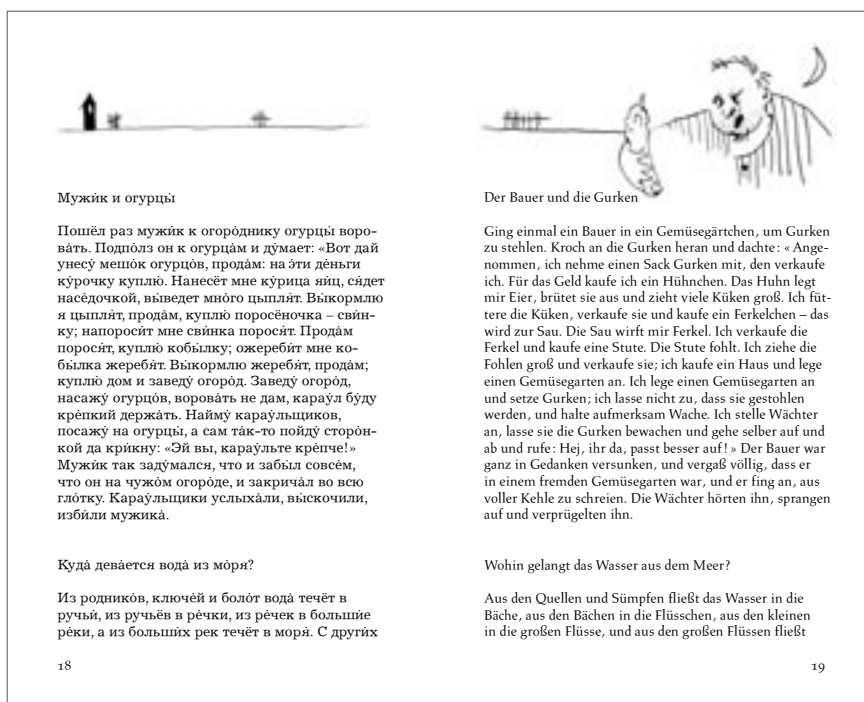

You get fixed prices providing you with a solid basis for your cost calculations.

MDI Medical Ltd in Kells is Ireland's largest distributor of medical devices.

Since 2011 we design all their advertisements and everything from business card to pull up banner, after revising and unifying the CI.

For the county of Wesel in Germany we designed the bilingual "factbook logistics".

This is just one example for the extensive work we did for public clients like cities, counties, hospitals etc.

For many years we attended to the multilingual series of the prominent German publisher dtv (Deutscher Taschenbuch Verlag), producing books in every European language.

The Welch Allyn Connect® Clinical Surveillance System

Comprehensive Vital Signs Measurement and Physical Assessment Capabilities— in one Connected System.

Welch Allyn is a leading manufacturer of clinical diagnostic devices. The Welch Allyn Connect system is a comprehensive solution for clinical surveillance, providing accurate vital signs and physical assessment data in a single, connected system. It is designed to be used in a variety of clinical settings, from the hospital to the home.

Key features include:

- Accurate vital signs measurement (heart rate, blood pressure, oxygen saturation, respiratory rate, temperature).
- Physical assessment capabilities (auscultation, percussion, palpation).
- Integration with existing clinical information systems (CIS) for seamless data exchange.
- Secure, encrypted data transmission.
- Comprehensive documentation and reporting capabilities.

For more information, visit www.welchallyn.com.

BeneView T1
Your **IMEC** Assistant Between Points of Care

It's a small, compact multi-parameter monitor with a high-angle, rugged display for a complete suite of accurate vital signs and physical assessment capabilities. It's designed to be used in a variety of clinical settings, from the hospital to the home.

IMEC Series
Innovative patient monitor with "green" credentials

The IMEC series uses low-power, low-voltage components, making it an energy-efficient choice for your patient care. It also features a long-life battery, making it ideal for use in remote or mobile settings. The IMEC is portable, the most portable device in its class, and is designed for use in a variety of clinical settings.
